

10 REASONS WHY CHOOSE PAVERS OVER CONCRETE FOR YOUR DRIVEWAY

10 REASONS WHY CHOOSE PAVERS OVER CONCRETE FOR YOUR DRIVEWAY

When it comes to your driveway, before you make your decision, we provide you with 10 top reasons why you should consider choosing pavers over exposed aggregate concrete.

Pavers don't crack

Unlike poured concrete that doesn't allow for various soil conditions and highly reactive soil types that are prevalent in Adelaide, pavers won't crack whereas a concrete driveway may get unsightly cracks.

Paving Patterns

You have more options with pavers in terms of colours, shapes as well as paving patterns. You can create some eye catching and elegant patterns in your paving. For ideas on your paving pattern, check out our Paving Pattern brochure.

Range of exposed aggregate concrete pavers

Exposed aggregate finish can be achieved with our exposed aggregate pavers. Our range includes -

- Honed Traditional Pavers
- Concrete Driveway Pavers
- Euro Stone Pavers

You can also visit your local APC to pick up a free sample!

User friendly

Pavers are much easier to work with, lay, maintain and even repair. You can view our Paver Maintenance brochure.

Great for the DIYer

Pavers can be easier to lay than you think. These days, people are doing more DIY projects around their house, including paving. With many resources available at your fingertips, including our Paving Guide brochure, you could attempt to do your own paving.

Repairable / Can be replaced

Unlike exposed aggregate concrete driveways, a paved driveway can be easily fixed, should a truck reverse into your driveway and crack or chip a paver. A concrete driveway is not easily fixed and requires a lot of work to repair and the finished result will be a patched looking concrete driveway.

Access to underground services

A lot of underground services that are connected to the house may be located under your driveway. If you need to access these services, a paved driveway allows much easier access and you simply remove then relay the pavers. However, an exposed aggregate concrete driveway will need to be dug up and redone.

Self-draining

Pavers allow for draining as water has the ability to drain through the gaps within the pavers. A concrete driveway being solid, only allows the water to run across the surface.

Value for money

People assume that a poured concrete driveway is cheaper but this isn't necessarily the case. Make sure you do your research into costs before deciding. Standard brick pavers cost about \$29.00 per square metre. Our exposed aggregate driveway pavers start from \$49.95 per square metre. Some exposed aggregate poured concrete average around \$100 to \$150m2 for a decorative stencilled concrete driveway.

Add value to your home

Our exposed aggregate driveway pavers not only look impressive but they also complement a range of other landscape products such as our garden path pavers, garden edging and garden walls and retaining walls.
